

We are a growing online university looking for a mathematics professor to author a brief and accessible textbook (approximately 100,000 words) for our survey of mathematical methods course which will include the follow subject areas: logic and problem solving, beginning algebra, geometry, consumer and business mathematics, introductory probability, and descriptive statistics. The content will be delivered online and in a highly interactive format. Author should have extensive writing and teaching experience, particularly in presenting content in an engaging way to an introductory audience. Author will have 12 months to complete project. This is not a royalty-based work but a work for hire, with staggered payments for completed chapters. The author can work from any location.

If you are interested, please contact us. We would like to see qualifications and writing samples.
