

## An Eccentric Family of Functional Equations

**Michael W. Ecker**, *Pennsylvania State University, Wilkes–Barre Campus* (retired)

This article offers a succession of functional equations involving compositions and powers of an unknown polynomial function  $f$ . As the original problem is varied or made more challenging, some things change. However, new patterns emerge, each one leading to new questions.

Keywords: compositions, powers of polynomials, polynomials, functional equation

**Michael W. Ecker** received his PhD in mathematics from the City University of New York in 1978. Before retiring in 2016, he had a 45-year career as a mathematics professor, the last 30 at Pennsylvania State University's Wilkes–Barre campus. Published regularly in different venues, he served on national committees responsible for creating competitive national exams. For 21 years, he also labored over his own newsletter, *Recreational & Educational Computing*, featuring the interplay of mathematics, computers, and recreations. Besides owning a whopping 140 computers, he is the author of 500 publications. Mike is also the Problem Section Editor of this journal.
