

One Puzzle, Three Solutions, Multiple Connections

Michael W. Ecker

Pennsylvania State University, Wilkes-Barre (retired)

It is almost always educationally stimulating to expose our students to small challenges in the way of puzzles. They allow for multiple methods of solutions, discussion of advantages and disadvantages to approaches, and a bonus of new connections not previously seen by students. They can also be fun or charming. Students will probably see this one more as a small challenge.

Keywords: problems, problem-solving, alternative methods, comparative approaches, arithmetical puzzle

Michael W. Ecker received his PhD in mathematics from the City University of New York in 1978. Before retiring in 2016, he had a 45-year career as a mathematics professor, the last 30 at Pennsylvania State University's Wilkes-Barre campus. Published regularly in different venues, he served on national committees responsible for creating competitive national exams. For 21 years, he also labored over his own newsletter, *Recreational & Educational Computing*, featuring the interplay of mathematics, computers, and recreations. Besides owning a whopping 125 computers, he is the author of 500 publications. Mike is also the Problem Section Editor of this journal.
