

A New Perspective On Related Rates

Keith A. Nabb
Moraine Valley CC

Keith Nabb teaches mathematics at Moraine Valley Community College (Palos Hills, IL) and he is a graduate student in the Department of Math & Science Education at Illinois Institute of Technology (Chicago, IL). His interests include technology in mathematical learning and students' reasoning, thinking, and beliefs.

Abstract

A first-semester calculus student uncovers an unusual way of solving related rates problems—one that differs noticeably from the exposition found in mathematics textbooks. A classroom discussion of this new technique is described as she and her classmates grapple with the possible validity of the technique. The ways in which this discussion deepened ties across previously learned topics is emphasized.
