

Calculus Writing Prompts: “You know what I mean.... I just can’t explain it!”

Jason D. Johnson, Zayed University, Dubai, UAE

Carla Rudder, Rabdan Academy, Abu Dhabi, UAE

Abstract

In this paper, a study was designed to explore mathematics majors engaged in Calculus writing prompts. An analysis for both the derivative and integral writing prompts were completed. The results indicate that the mathematics majors could solve derivative and integral problems, however, some were unable to articulate their mathematical thinking and the thinking of others.

Jason D. Johnson teaches mathematics, mathematics for prospective teachers, and mathematics education courses. He is especially interested in teaching mathematics for social justice, ethnomathematics, and effective use of technology in the teaching and learning of mathematics. He is currently an associate professor in the College of Education at Zayed University (United Arab Emirates). He received his PhD in Mathematics Education from The Florida State University.

Carla Rudder is currently an associate professor of mathematics at Rabdan Academy. Prior to joining Rabdan Academy, she taught mathematics at Zayed University in Abu Dhabi, UAE, a community college in Florida, and a middle school at an international school in Singapore. Rudder was educated at North Carolina State University in Raleigh, NC, and graduated with a BS in Applied Mathematics and a master’s and a doctorate, both in mathematics education from Florida State University. Rudder has conducted research in both mathematical problem solving and developmental mathematics. Since beginning her career, Rudder has realized a passion for developmental mathematics education, curriculum development, and action research.
