

The Unbirthday Problem

Charles Li and **William Farber**, Mercy College

Abstract

What is the probability that the birthdays of n people will have at least one missing month? This question is related to the famous Birthday Problem, and its solution is synergistic with typical audience sizes used to demonstrate the Birthday Problem.

Charles Li is an assistant professor of mathematics at Mercy College. He earned his PhD in mathematics from the CUNY Graduate Center, and his BEng in electrical engineering from Cooper Union.

William Farber is an associate professor of mathematics education for the Mercy College School of Education. William teaches both mathematics and mathematics education courses. He has a particular interest in mathematical problem solving. Moreover, William coordinates a multitude of professional development initiatives and grant programs targeted to secondary school pre-service and in-service mathematics teachers. Recently (September 2015), The New York State Association of Mathematics Supervisors (NYSAMS) inducted William into the New York State Mathematics Educators Hall of Fame.
