

Using Technology to Make Calculus Volumes of Fun

Chris Bolognese, *Columbus Academy*

Many Calculus I students learn how to apply calculus to find areas and volumes. This article outlines a three-day project to make this content come to life for our students, using modern technological tools, such as Desmos and GeoGebra, to aid in visualization.

Keywords: volume, calculus, tech tools, modeling

Chris Bolognese teaches mathematics and computer science at Columbus Academy in Columbus, Ohio. He enjoys writing mathematics contest problems, helping facilitate mathematics teachers' circles, and using mathematical technology. In his free time, he likes collecting vinyl records, playing bass, and hanging out with his pets.
