

A Problem Involving Circle Areas: The Power of Rethinking and Generalizing

Michael W. Ecker, *Pennsylvania State University, Wilkes-Barre Campus* (retired)

How we solve mathematics problems is not just about applying known methods. Frequently, thinking differently about the same problem can lead to different approaches, different pictures, and different solutions. The full appreciation of a problem that begins with areas of two circles can blossom into something much greater and more general than a single, simple solution.

Keywords: geometry, problem solving, circles

Michael W. Ecker received his PhD in mathematics from the City University of New York in 1978. Before retiring in 2016, he had a 45-year career as a mathematics professor, the last 30 at Pennsylvania State University's Wilkes-Barre campus. Published regularly in different venues, he served on national committees responsible for creating competitive national exams. For 21 years, he also labored over his own newsletter, *Recreational & Educational Computing*, featuring the interplay of mathematics, computers, and recreations. Besides owning a whopping 140 computers, he is the author of 500 publications. Mike is also the Problem Section Editor of this journal.
